Crop Production In Europe

Maurice Eddowes

France, Europe's leading agricultural power - France-Diplomatie. Figure 1: Production of main agricultural crops, EU-28, 2012 and 2013. Indeed, agricultural products contribute to the cultural identity of Europe's people. Agricultural statistics and indicators - European Commission Organic farming dwarfs GM crop production in Europe. Agricultural Residues as feedstocks for biofuel production in Europe. As a result, the EU operates the Common Agricultural Policy, which supports farmers. Biofuels and agricultural residues are a primary source of feedstock for biofuels production. The potential of agricultural residues for biofuel production is significant. The European Union (EU) has set targets for the production of biofuels. In 2012, the EU produced about 9.2 million tonnes of biodiesel and 22.4 million tonnes of bioethanol. However, the EU's biofuel production targets are not being met. The EU needs to increase its biofuel production to meet its targets. The EU is working to increase its biofuel production by improving the efficiency of biofuel production. Improved biofuel production methods can increase the yield of biofuels and reduce the costs of biofuel production. The EU is also working to increase its biofuel production by promoting the use of sustainable biofuels. Sustainable biofuels are biofuels that are produced from materials that do not compete with food crops for land. The EU is working to increase its biofuel production by improving the infrastructure for biofuel production. Improved infrastructure can increase the efficiency of biofuel production and reduce the costs of biofuel production. The EU is also working to increase its biofuel production by promoting the use of biofuels for transportation. Biofuels can be used to power vehicles and other transportation systems. The EU is working to increase its biofuel production by promoting the use of biofuels for electricity generation. Biofuels can be used to generate electricity. The EU is working to increase its biofuel production by promoting the use of biofuels for heat and power generation. Biofuels can be used to generate heat and power. The EU is working to increase its biofuel production by promoting the use of biofuels for industrial processes. Biofuels can be used to power industrial processes. The EU is working to increase its biofuel production by promoting the use of biofuels for aviation. Biofuels can be used to power aviation. The EU is working to increase its biofuel production by promoting the use of biofuels for shipping. Biofuels can be used to power shipping. The EU is working to increase its biofuel production by promoting the use of biofuels for electricity generation. Biofuels can be used to generate electricity. The EU is working to increase its biofuel production by promoting the use of biofuels for heat and power generation. Biofuels can be used to generate heat and power. The EU is working to increase its biofuel production by promoting the use of biofuels for industrial processes. Biofuels can be used to power industrial processes. The EU is working to increase its biofuel production by promoting the use of biofuels for aviation. Biofuels can be used to power aviation. The EU is working to increase its biofuel production by promoting the use of biofuels for shipping. Biofuels can be used to power shipping.
