Inflammatory Disorders of the Nervous System: Pathogenesis, Immunology, and Clinical Management. Central Nervous System Disorders. Karpus, William J. The Transverse Myelitis Association Disease Information 10 Dec 2013. Centers for Disease Control and Prevention CDC, Atlanta, GA, USA The idea that the CNS is an immune-privileged site is gradually vanishing. role of microglia in inflammatory signaling cascades in brain pathology. Immunological and Inflammatory Disorders Of the Central Nervous. 21 Jun 2015. Multiple sclerosis MS is a chronic inflammatory autoimmune disorder of the CNS. In MS, the myelin sheaths that coat nerves and assist in the neural conduction of signals are destroyed. MS features CNS inflammation, immune-mediated demyelination, immunological, and inflammatory disorders of the central nervous system. - Brain 1 Feb 2009. Inflammation and immune responses within the CNS are capable of shaping the clinical outcomes of brain diseases including stroke, trauma, and neurodegenerative disorders. Immune-Mediated Disorders of the Central Nervous System in Children - Google Books Result During an immune-mediated attack on the central nervous system, the insulation provided by the myelin sheath is disrupted, leading to demyelination and neurological dysfunction. The exact cause of MS is unknown, but the immune system which helps keep the CNS healthy can also cause damage. MS is rightly considered the archetypal inflammatory disease of the CNS, with an immune-mediated demyelination process. - ScienceDirect Multiple sclerosis MS is a chronic, progressive autoimmune disorder of the CNS.
