Proteomics And Protein-protein Interactions: Biology, Chemistry, Bioinformatics, And Drug Design

Gabriel Waksman
The rapidly evolving field of protein science has now come to realize the advent of high throughput proteomics to monitor protein-protein interactions. Bridging the two ends of the spectrum is bioinformatics and computational chemistry, and key regulator proteins have been targeted for drug discovery. Protein-protein interactions as new targets for drug design. Helicobacter pylori exploits human CEACAM proteins for host-specific.
